

## 2. Adjustments Made to Schemas:

### Open Schema File:

- Locate the schema file in your Sanity project's schemas directory.

### Modify Schema:

- Add, edit, or remove fields, types, or validation rules as needed.

### Test Locally:

- Run `sanity start` to test the changes in Sanity Studio.

### Update Queries:

- Adjust any GROQ queries or frontend code to match the updated schema structure.

### Verify Updates:

- Check the website and Studio to ensure data is properly displayed and functional..
