Business Pitch Desk Presentation :

Introduction :

Resturant Marketplace

We will provide a resturant marketplace that bridge the gap between resturant and customers. It will integrate user friendly features, dynamic menus, and real time interaction to enhance the dining experience.

Problem:

In today's fast-paced world, customers expect fresh, hot, and high-quality food delivered to their doorstep. However, many existing food delivery services fail to meet these expectations due to delays, inefficient packaging, and lack of real-time tracking. As a result, customers often receive food that is cold, stale, or not up to the restaurant's original standards. Additionally, issues such as inaccurate delivery times, limited restaurant options, and lack of transparency in food preparation further diminish the overall dining experience. This leads to customer dissatisfaction, wasted food, and a decline in trust towards food delivery services.
